ABOUT US

The aim of the Theoretical Linguistic Research Group is to study from a formal perspective empirical phenomena in Spanish, Romance languages and also some typologically more distant languages. The analyses and proposals developed are framed in various lines of research (lexicon-syntax interface, syntax-semantics-pragmatics interface, aspect, properties of NPs, predication). The ultimate goal is to formulate hypotheses and theories of universal validity within explicit models of grammar. The group also works on the creation and edition of linguistic resources, with special attention to real speech corpus, providing material to support theoretical studies and to integrate into the analysis varieties other than the standard.

RESEARCH LINES

- Formal grammar of Spanish and other Romance languages
- Linguistic variation
- Linguistic Corpora
- Syntactic theory
- Semantic-Pragmatic Theory
- Syntax-semantics-pragmatics interface relationships
- Lexicon-syntax interface relations

OFFERED SERVICES

- Training of secondary school teachers, SLE teachers, language consultancy companies, naming...
- Specialized teaching: training courses and linguistic consultancy, especially in grammar issues
- Elaboration of didactic material (primary school, secondary school, Spanish as a foreign language) on grammatical aspects
- Elaboration of oral corpus for linguistic description
